- ✓ Business Process Automation

“Building smart digital solutions that help businesses grow, rank higher, automate work and generate real results.”

TO WHOM IT MAY CONCERN

📅 14 May 2025

Dear Hiring Manager,

I am writing to express my sincere interest in a Full Stack Developer / Software Engineer position in your organization.

I bring 9+ years of experience in building custom web applications, ERP/CRM systems, SEO-focused websites, landing pages, automation tools, and digital solutions that support business growth.

I have strong expertise in Laravel, React, Node.js, Vue.js, Angular, REST APIs, MySQL, MongoDB, and modern frameworks. My experience includes developing scalable applications, dashboards, CMS platforms, fleet management systems, property management systems, and business automation tools.

I have also built fintech and accounting applications with modules like double-entry accounting, project budgeting, payment orders, and purchase orders, along with e-commerce solutions and WordPress websites. I have working experience in Laravel, React, and Learning Management Systems (LMS).

I also have hands-on experience in SEO and digital growth, delivering top 10 Google ranking results, and organic reach that helped companies achieve **1.7 MILLION** in profit/value through digital growth initiatives after COVID.

I understand how businesses work and how technology can reduce manual work, improve efficiency, and increase conversions. I leverage Python and AI automation to streamline processes, reduce errors, and enhance overall productivity.

I am confident that my technical skills, SEO knowledge, and business mindset will be a valuable asset to your team and help your company achieve strong results.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to your success.

Sincerely,

Nabeel Javed
